

Networks & the Internet

These questions cover how devices connect to networks and the internet - part of the Year 6 computing curriculum, building toward secondary school computer science.

Name: _____ Date: _____

Section A: Networks

1. What is a network?

2. Name one device that can connect to a network.

3. What does "Wi-Fi" allow a device to do?

4. What is the difference between the internet and the World Wide Web?

5. Give one example of a network you might use at school.

Section B: How the Internet Works

1. What do we call the address you type to visit a website?

2. Why might a website take longer to load with a slow internet connection?

3. What is one way information can travel between two connected devices?

4. Why is it important to have a secure password for online accounts?

5. Name one way schools or families can control access to the internet at home.
